Biography:

Hadir Aly, 41 years old, associate professor in National Institute of Oceanography and Fisheries (NIOF). Was born in 25th of January 1980, in Alexandria, Egypt. Received M.S.C and Ph.D. in Agricultural Sciences in Faculty of Agriculture (Saba Basha), Alexandria University. Married to Prof. Mohamed Gomaa and have a teen daughter. Also, have been in Germany from 2008 January to 2009 August as a companion of my husband while he was having Ph.D fellowship.

My husband called me a bookworm as I like reading very much. Novels and social books are my preferred. Grew up in a small family of my parents and younger brother. Very social, beloved, and trusted by my friends. Hard worker as I like my job very much. After I had worked 11 years in Agriculture Governorate, decided it was time for career shifting as I like to deal with living organisms as well as to complete my research as an academic researcher in NIOF.

As a fish rearing and production associate professor, main interest is to enhance the environmental conditions in fishpond within an ecosystem approach. As working in an applied research station, the only saline water source is 100 m deep saline water well. I devoted my work to improve the cultured fish habitat by enhancing the water quality. Trying to improve skills in new technologies of integrated systems involved in Aquaculture sector. Nowadays, working on manipulate fish growth in captivity by using eco- friendly materials to enhance water quality and reduce the production cost. Looking forward to establishing an integrated aquaculture system accomplishing a HACCP plan and principles.

Hadir A. A. Aly
Associate Professor
National Institute of Oceanography
and Fisheries
